

## CONTENTS

Preface		xi
About the Author		xiii
1	INTRODUCTION TO ENVIRONMENTAL TESTING	1
2	DYNAMIC TESTING OVERVIEW	5
2.1	Displacement, Velocity, Acceleration Relationship	6
2.2	Single Degree of Freedom System	7
2.3	Damping	8
2.4	Solution using Viscous Damping	9
2.5	Forced Vibration	12
2.6	Degrees of Freedom	15
2.7	Input/output Terminology	18
2.8	Nyquist Plot	22
2.9	Hysteretic Damping	24
3	SIGNALS AND THEIR REPRESENTATION	27
3.1	Periodic Signals	27
3.2	Transient Signals	29
3.2.1	Classical Pulses	30
3.3	Random Signals	32
3.4	Basic Amplitude Statistics	33
3.4.1	Probability Density Functions	33
3.4.2	The Gaussian (Normal) Distribution	35
3.4.3	Typical Probability Density Functions	37
3.4.4	The Chi-square Distribution	38
3.5	Frequency Domain Analysis	40
3.5.1	Octave and One-Third Octave Analysis	40
3.5.2	Constant Percentage Bandwidth Analysis	42
3.5.3	Constant Bandwidth Analysis	42
3.5.4	FFT Analysers	43
3.5.5	The Power Spectral Density Function	44
3.5.6	The Cross Spectral Density Function	46
3.5.7	Correlation in the Frequency Domain	48
3.5.8	System Analysis	49
3.5.9	Implications of Signal Type for Product Testing	50
4	VIBRATION AND SHOCK MEASUREMENT	53
4.1	Measurement of Vibration	53
4.2	Piezoelectric Accelerometers	54
4.2.1	Construction	54
4.2.2	Sensitivity	56
4.2.3	Frequency Range	56
4.2.4	Attachment	58
4.2.5	Sources of Uncertainty	60
4.2.6	Integrated Electronic Piezoelectric Accelerometers	62
4.2.7	Transducer Electronic Data Sheets (TEDS)	63
4.3	Piezoelectric Force Transducers	63
4.4	Piezoelectric Accelerometers for Shock Measurement	64
4.4.1	High Frequency Limitations	64
4.4.2	Low Frequency Limitations	66
4.4.3	Dynamic Range and Non-Linearities	68
4.4.4	Zero Shift	68

	4.4.5	Slew Rate Limiting	69
4.5		Amplifiers	70
	4.5.1	Voltage Amplifiers	70
	4.5.2	Charge Amplifiers	71
4.6		Piezoresistive Transducers	72
5		ELECTROMAGNETIC VIBRATION GENERATORS	77
5.1		Principle of Operation	78
	5.1.1	The Stator	79
	5.1.2	The Armature and Coil Assembly	80
	5.1.3	The Suspension System	81
5.2		Dynamic Response	83
5.3		Performance Rating	84
	5.3.1	Force Rating	84
	5.3.2	Motion Limitations	84
	5.3.3	System Distortion	87
	5.3.4	Cross Axis and Rotary Motion	87
5.4		Sizing the Shaker for a Sine Test	88
5.5		Sizing the Shaker for a Random Test	89
5.6		Shaker Cooling	92
5.7		Power Efficiency	93
5.8		Degaussing	93
5.9		Installation	93
5.10		Load Support	95
5.11		Modal Shakers	97
5.12		Multi-axis Vibration Testing	97
	5.12.1	MESA/MEMA Procedures	99
6		POWER SUPPLIES FOR E/M GENERATORS	103
6.1		Electrical Characteristics	103
	6.1.1	Static Impedance	104
	6.1.2	Influence of Motion	105
	6.1.3	Impedance under Motion	106
6.2		Operational Performance	107
6.3		Power Requirements	107
	6.3.1	Worked example	109
6.4		Random Waveforms	112
6.5		Shock Waveforms	113
6.6		Matching Transformer	113
6.7		Amplifier Features	114
	6.7.1	Class “D” Amplifiers	116
6.8		Cooling	118
7		MECHANICAL (CLASSICAL) SHOCK	119
7.1		Basic Mechanical Calculations	120
	7.1.1	Example 1 – Basic Parameters during Impact	120
	7.1.2	Example 2 – Inelastic Impact	121
	7.1.3	Example 3 – Force Transmitted to the Foundation	122
	7.1.4	Example 4 – Elastic Impact	122
7.2		Classical Shock	123
7.3		Shock Testing Machines	126
	7.3.1	Drop and Topple	126
	7.3.2	Bump Machines	127
	7.3.3	Free-fall Drop Machines	127
	7.3.4	Force Assisted Drop Machines	129

	7.3.5	Pendulum Machines	129
	7.3.6	Programmers	130
	7.3.7	Air Guns	134
	7.3.8	Hopkinson Bar	135
	7.3.9	Resonant Beams and Plates	137
	7.3.10	Sled Impact Machines	138
	7.3.11	Filtering	138
7.4		Shocks on Shakers	139
	7.4.1	Pulse Shaping with Pedestals	142
	7.4.2	Classical Pulse Implementation	144
	7.4.3	Sizing for a Shock Test	146
8		SHOCK RESPONSE SPECTRA	149
	8.1	Introduction	149
	8.2	Derivation of SRS	150
	8.3	SRS for Classical Waveforms	152
	8.4	SRS and Fourier Comparison	154
	8.5	Units and Damping	157
	8.6	Pseudo-Velocity	157
	8.7	SRS Calculation	159
	8.8	Shock Synthesis	159
	8.8.1	Decaying Sinusoids	160
	8.8.2	Zero Residual Displacement (ZERD) Pulses	161
	8.8.3	Shaker Optimised Cosine (SHOC) Pulses	163
	8.8.4	Wavsyn Pulses	164
	8.8.5	Wavelets	165
	8.9	Pyrotechnic SRS	168
9		SIGNAL ANALYSIS TECHNIQUES	173
	9.1	Digital Data Acquisition	173
	9.1.1	Identification	174
	9.1.2	Quantisation Error	174
	9.1.3	Amplification	174
	9.1.4	Rate of Sampling and Aliasing	175
	9.1.5	Triggering the ADC	177
	9.2	Frequency Domain Analysis	178
	9.2.1	The Fourier Series	178
	9.2.2	The Fourier Integral Transform	180
	9.2.3	The Finite Fourier Transform	180
	9.2.4	The Discrete Fourier Transform and FFT	182
	9.3	The Power Spectral Density Function	183
	9.4	Potential Uncertainties in Spectral Estimates	184
	9.4.1	Leakage	184
	9.4.2	Windowing	188
	9.4.3	Transient Signal Capture	190
	9.4.4	Spectral (Ensemble) Averaging	191
	9.4.5	Frequency Resolution	193
	9.5	Frequency Response Functions	194
	9.5.1	Practical Measurement of FRF	194
10		VIBRATION FIXTURES	199
	10.1	Fixture Design Consideration	199
	10.2	Force	200
	10.3	Strength	200
	10.4	Mass	200

10.5	Frequency Considerations	201
10.5.1	Beam-like Elements	202
10.5.2	Plate-like Elements	203
10.5.3	Solid Cube-like Elements	205
10.5.4	F.E. Analysis or Approximations?	205
10.6	Choice of Materials	206
10.7	Fabrication	208
10.8	Centre of Gravity	209
10.9	Fixture Attachments	210
10.10	Bookend Fixtures	213
10.11	Slip Tables	215
10.12	Head Expanders	216
10.13	Cost	216
10.14	Confirmation of Performance	217
10.14.1	Empirical Evaluation	217
10.14.2	Resonance Interaction	217
10.14.3	Theoretical and Experimental Assessment	221
11	VIBRATION CONTROL	223
11.1	Introduction	223
11.2	Sine Sweep Control	224
11.2.1	Sweep Rate	228
11.2.2	Servo Speed	229
11.2.3	Tracking Filter	229
11.2.4	Resonance Search	230
11.2.5	Averaging, Multi-Level and “Greater-Than” Control	230
11.3	Digital Random Control	232
11.4	Error Correction	233
11.4.1	Digital to Analogue Conversion (DAC)	233
11.4.2	Bit Size	234
11.4.3	Time Domain Randomiser	234
11.4.4	Equalisation Control Loop Processing	235
11.5	Continuous Convolution	236
11.6	Notching	238
11.7	Reference, Alarm and Abort Levels	238
11.8	Mixed Mode and Transient Testing	240
11.9	Time Domain Replication	240
11.10	Conclusions	241
12	MAXIMAX RESPONSE SPECTRA and FATIGUE DAMAGE SPECTRA	243
12.1	Introduction	243
12.2	Exceedance of Critical Maximum Vibration Level	243
12.3	The Miles Equation	244
12.4	The Rayleigh Distribution	246
12.5	Maximum Response Spectrum	248
12.6	Failure due to Fatigue	249
12.7	Fatigue Damage Spectrum	249
12.8	Computation of FDS in the Time Domain	249
12.8.1	Relative Motion Response	250
12.8.2	Stress and Pseudo-Velocity	250
12.8.3	Rainflow and Histogram Analysis	251
12.8.4	Wohler (S/N) Curve	254
12.8.5	Palmgren-Miner’s Rule	255
12.8.6	Fatigue Damage	255
12.9	Computation of FDS in the Frequency Domain	256

13	CLIMATIC TESTING OVERVIEW	259
	13.1 The Earth's Atmosphere	259
	13.2 Solar Radiation	261
	13.3 Temperature	263
	13.3.1 Heat	264
	13.3.2 Heat Transfer Mechanisms	264
	13.4 Humidity	269
	13.5 Influence of Time	272
	13.6 Pollution and Contamination	272
	13.7 Summary	272
14	TEMPERATURE TESTING	275
	14.1 Temperature Effects	275
	14.2 Thermal Expansion	277
	14.3 Testing Regimes	278
	14.3.1 Steady State	278
	14.3.2 Diurnal Cycling	279
	14.3.3 Rapid Temperature Changes	280
	14.3.4 Thermal Shock	281
	14.4 Temperature in Combination	282
	14.5 Chamber Considerations	283
	14.5.1 Air Separation	284
	14.5.2 Baffles	285
	14.5.3 Health Risks	287
15	TEMPERATURE MEASUREMENT	289
	15.1 Thermal Expansion Methods	289
	15.1.1 Liquid in Glass	289
	15.1.2 Bimetallic Strip Thermometer	289
	15.1.3 Constant Volume Thermometer	290
	15.2 Extreme Temperature Measurement Devices	291
	15.2.1 Magnetic Susceptibility Thermometer	291
	15.2.2 The Pyrometer	292
	15.3 The Thermocouple	292
	15.3.1 Thermocouple Materials	293
	15.3.2 Thermocouple Output Characteristics	294
	15.3.3 Standards and Colour Codes	296
	15.3.4 Hot Junction Configurations	297
	15.3.5 Sheath and Wire Insulation Material	297
	15.3.6 Cold Junction Compensation	298
	15.3.7 Law of Intermediate Metals	299
	15.4 The Platinum Resistance Thermometer	300
	15.4.1 PRT Configurations	300
	15.4.2 Electrical Resistance	302
	15.4.3 PRT Connections	303
	15.4.4 Two Wire Connection	305
	15.4.5 Three Wire Connection	305
	15.4.6 Four Wire Connection	306
	15.4.7 PRT Standards and Limitations	306
	15.5 The Thermistor	309
	15.6 Choice of Sensor	309
	15.7 Sensor Positions	310
	15.7.1 Calibration Sensors	312
	15.7.2 Control Sensor	312

	15.7.3 Monitoring Sensors	313
16	HUMIDITY TESTING	315
	16.1 Introduction	315
	16.2 Interaction of Physical Parameters	316
	16.3 Boiling and Pressure	317
	16.4 Natural Environments	319
	16.5 Effects of Humidity	322
	16.6 Vapour Sealing	323
	16.7 Generation and Removal of Humidity	324
	16.7.1 Humidity Generation	324
	16.7.2 Vapour versus Droplets	326
	16.7.3 Practical Systems	327
	16.7.4 Humidity Removal	327
	16.8 Chamber Considerations	328
	16.9 Chamber Performance	329
17	HUMIDITY MEASUREMENT	333
	17.1 Dew-Point Hygrometer	333
	17.2 Wet and Dry Psychrometer	334
	17.3 The Psychrometric Chart	336
	17.3.1 Example Application	341
	17.4 Other Sensor Technologies	342
	17.4.1 Capacitive Humidity Sensor	342
	17.4.2 Resistive Humidity Sensors	343
	17.4.3 The Dew Cell	343
	17.4.4 Thermal Conductivity Humidity Sensors	344
	17.4.5 Humidity Indicators	345
	17.5 Sensor Position	345
	17.6 Humidity Control	345
18	CLIMATIC CONTROL SYSTEMS	347
	18.1 The Controller	347
	18.1.1 ON-Off Control	348
	18.1.2 Proportional Control	349
	18.1.3 Integral Control	353
	18.1.4 Derivative Control	353
	18.2 Optimal Control Strategy	354
	18.2.1 Loop Tuning	355
	18.2.2 Iterative Self Tuning	357
	18.2.3 Adaptive Tuning	358
	18.3 Outputs	358
	18.4 Alarms	360
19	HEATING AND REFRIGERATION PLANT	365
	19.1 Heaters	365
	19.2 Refrigeration Principles	366
	19.2.1 Evaporation and Boiling	367
	19.2.2 Effect of Pressure	367
	19.3 Refrigerants	368
	19.3.1 Greenhouse Gases	368
	19.4 Commercial Refrigerants	370
	19.5 Liquid Nitrogen Cooling	372
	19.6 Mechanical Refrigeration	374
	19.7 Single and Multiple Stage Systems	377

	19.7.1 Compound Stage Systems	377
	19.7.2 Cascade Systems	378
20	ALTITUDE TESTING	381
	20.1 Introduction	381
	20.2 Effect of Vacuum	382
	20.3 Chamber Considerations	383
	20.4 Vacuum Generation	383
	20.4.1 Rotary Vane Pump	384
	20.4.2 Diffusion Pump	385
	20.5 Vacuum Measurement	386
	20.5.1 The Bourdon Gauge	387
	20.5.2 The McLeod Gauge	387
	20.5.3 The Pirani Gauge	388
	20.5.4 The Thermocouple Pirani Gauge	389
	20.5.5 The Penning Gauge	389
	20.5.6 Hot Cathode Ionisation Gauge	390
	20.6 Temperature Response under Vacuum	390
	20.7 Altitude Simulation	392
	20.7.1 Altitude – Storage	392
	20.7.2 Altitude – Operational	392
	20.7.3 Rapid Decompression	393
	20.7.4 Explosive Decompression	393
	20.7.5 Temperature, Altitude and Humidity	393
	20.7.6 Mission Profiles	393
21	SOLAR RADIATION	397
	21.1 Introduction	397
	21.2 Spectral Characteristics	398
	21.3 Temporal Variation	401
	21.3.1 Daily Variation	401
	21.3.2 Seasonal Variation	401
	21.4 Effects of Solar Radiation	403
	21.4.1 Thermal Effects	403
	21.4.2 Photochemical Effects	403
	21.5 Simulation	404
	21.5.1 Lamps	404
	21.5.2 Testing	406
	21.5.3 Standards	406
	21.6 Measurement Instrumentation	407
	21.7 Conclusions	408
22	MEASUREMENT UNCERTAINTY	411
	22.1 Error and Uncertainty	411
	22.2 Resolution	412
	22.3 Traceability	413
	22.4 Statistical Processes	414
	22.5 Rectangular Distributions	414
	22.6 Confidence Intervals	415
	22.7 Evaluating Uncertainty	416
	22.7.1 Type “A” evaluation	416
	22.7.2 Type “B” Evaluation	416
	22.8 Combination of Uncertainty Values	419
	22.9 Coverage Factor	419
	22.10 Example	419

23	CONTAMINATION TESTING	423
23.1	Introduction	423
23.2	Effects on Products	424
	23.2.1 Sand and Dust	424
	23.2.2 Salt Spray, Fog and Mist	424
23.3	Health risks	425
23.4	Composition	425
23.5	Test Procedures	426
	23.5.1 Blowing Sand	426
	23.5.2 Blowing Dust	427
	23.5.3 Settling Dust	428
	23.5.4 Turbulent Dust	428
	23.5.5 Salt Spray, Fog and Mist	429
23.6	Material Protection from Contaminants	430
	23.6.1 Sand and Dust	430
	23.6.2 Salt	431
	Appendices	433
	Appendix A - Area under a PSD vs. log frequency curve	435
	Appendix B - Velocity and displacement change for half-sine pulse	437
	Appendix C - Terminal Peak Sawtooth	439
	Appendix D - Calculation of projectile shock pulse duration	441
	Appendix E - Underlying calculations for the Hopkinson Bar	443
	Appendix F - Pseudo-Velocity Response	445
	Appendix G - Equations of Motion	447
	Appendix H - The Convolution Integral	449
	Appendix I - Two Degree of Freedom Frequency Calculations	451
	Appendix J - Sine Sweep through Resonance	453
	Appendix K - Test Tailoring	455
	Appendix L - The Peltier Device	457
	Appendix M - Alternative Psychrometric Charts	459
	Index	461
